

# FOTIS HERODOTOU

## PERSONAL DETAILS

---

*E-mail* herodotouf@gmail.com  
*GitHub* github.com/fhero98  
*Portfolio* fhero98.github.io/developer-portfolio/

## EDUCATION

---

**University of Patras** 2017–2027  
*Department of Electrical and Computer Engineering*  
*Expected graduation: January 2027*

**Ayios Spyridonas Lyceum** 2013–2016

## PROFESSIONAL EXPERIENCE

---

**Research Associate (Web Data Processing)** Jan '26–Aug '26  
*Rinnoco Ltd, Limassol*

- Contributed to the development of a full-stack Laravel platform for social media data aggregation and analytics.
- Developed REST APIs, background jobs, client analytics dashboards, and external data ingestion workflows.
- Implemented LinkedIn and Facebook post synchronization, media extraction pipelines, and embeddable widgets for external websites.
- Integrated subscription and billing functionality using Stripe and Laravel Cashier.
- Contributed to C++ data processing and machine learning pipelines through debugging, output validation, deployment workflows, file processing, and Laravel API integration.
- Developed backend functionality for execution runs, uploaded files, generated results, submission packages, authentication, and PostgreSQL data storage.

**Technologies:**  
PHP, Laravel, C++, Python, PostgreSQL, MySQL, Docker, Linux, Bash, REST APIs, Git.

## INTERNSHIPS

---

**Junior Software Developer Intern** Mar '24–Aug '24  
*Rinnoco Ltd, Limassol*

Gained hands-on experience with Laravel, Docker, API integration, Google Analytics setup, and HTML page development.

Developed a dynamic webpage for the company's website.

Implemented a feature to automatically retrieve LinkedIn posts from the company's LinkedIn page using the LinkedIn API and MySQL, and display them on the company's news page.

## PROJECTS

---

### Diploma Thesis

2026–Present

University of Patras

**Title:** A Digital Twin Framework for Managing Electric Vehicle Charging in Smart Buildings.

**About:** Designing and developing a real-time system for monitoring and managing electric vehicle (EV) charging sessions using Digital Twin technologies.

The system models charging stations and charging sessions as digital entities, enabling real-time data updates, simulation, monitoring, and historical analysis.

Implements MQTT-based data communication and context management through Orion-LD (NGSI-LD), with Home Assistant dashboards for real-time monitoring, historical statistics, and automated notifications. Focuses on energy consumption tracking, charging behaviour analysis, and data-driven management of EV charging in smart buildings.

**Technologies:** Python, Docker, MQTT, NGSI-LD, Orion-LD, Home Assistant.

### University Project

Feb '23–Jun '23

Full-Stack Project  [GitHub](#)

Developed a student services web application as part of a university web development course.

Implemented the frontend using CSS, Bootstrap, JavaScript, and Express Handlebars for view handling.

Developed backend functionality using Node.js and MySQL, including password hashing, cookies, and session management.

### University Project

Oct '21–Jan '22

Local Championship  [GitHub](#)

Developed a graphical application for a university database course.

The application uses a relational database to manage and browse information related to a local championship.

### University Project

Jun '23

JUnit 5 / Maven  [GitHub](#)

Developed and tested Java functionality as part of an advanced programming course.

Used JUnit 5 and Maven for debugging, unit testing, and code coverage.

## SKILLS

---

*Languages*      Greek (native), English

*Programming*    PHP, C, C++, Python, Java, SQL, JavaScript

*Web Technologies*    Laravel, Node.js, Angular, HTML, CSS

*Databases*      MySQL, PostgreSQL

*Software & Tools*    MATLAB, JUnit 5, Maven, Git/GitHub, Docker, Linux, Bash, CI/CD

*Other Technologies*    REST APIs, Webhooks, Stripe, MQTT

## **PROFESSIONAL SKILLS CERTIFICATES**

---

### **Applied Software Engineering Fundamentals Specialization – IBM**

1. Introduction to Software Engineering
2. Hands-on Introduction to Linux Commands and Shell Scripting
3. Getting Started with Git and GitHub
4. Python for Data Science and AI Development
5. Developing AI Applications with Python and Flask

### **Junior Software Developer Internship – Rinnoco Ltd**

## **EXTRA ACTIVITIES**

---

1. Continuous learning and professional development
2. Watching football
